EDUCATION

Delhi Technological University

2020 – 2024

B.Tech in Electrical Engineering (Minor in Computer Science) — GPA: 8.5

EXPERIENCE

Birla Pivot (Aditya Birla Group)

June 2024 – Present

Software Engineer | Java, Spring Boot, Kafka, MySQL, Postgres, Redis

Inventory Management System (IMS)

- Architected a **concurrency-safe inventory & demand platform** processing **10K+ daily transactions** using transactional delta processing, row-level locking, and idempotent event handling — eliminating race conditions under parallel order traffic.
- Designed **retry safe workflows** reducing inventory inconsistencies by **80%+** and improving distributed fault tolerance
- Delivered **bulk allocation/modification APIs** supporting **1K+ items per request** with pre/post availability recomputation and post-commit event publishing — reducing manual correction effort by **60%**.

Pricing & Financial Calculations

- Built a **margin calculation engine** evaluating **5K+ daily B2B transactions**, enforcing pricing governance via threshold variance validation and negative-threshold gates.
- Developed a **CD calculation system** using event-driven architecture and idempotent processing — improving financial event reliability by **70%** and preventing duplicate computations.

Discount & Rule Management Platform

- Engineered a **TOD rule management system** handling **1000+ active discount rules** with multi-dimensional validation (seller, brand, category, term, date ranges) and duplicate prevention.
- Enabled automated discount rule ingestion and contract synchronization — reducing manual configuration effort by **65%** and improving pricing consistency across systems.

PROJECT

NeighborCart | Java, Spring Boot, Kafka, PostgreSQL, MongoDB, Redis

Sept 2025

- Architected and scaled a **distributed, event-driven order management system** handling **10K+ daily order events** with support for **500+ concurrent producers/consumers**, ensuring reliable asynchronous processing and eventual consistency.
- Implemented the **Transactional Outbox pattern** to achieve **exactly-once event publishing**, eliminating data loss during broker failures and improving message delivery reliability to **99.9%**.
- Designed **idempotent consumers** with retry-safe workflows, exponential backoff, and dead-letter handling — reducing duplicate processing incidents by **99%** and strengthening fault tolerance across services.
- Built a secure **JWT-based authentication and authorization framework** with **Redis-backed token revocation**, enabling stateless sessions and immediate token invalidation across distributed services.
- Improved backend scalability and responsiveness by decoupling synchronous dependencies into asynchronous pipelines, increasing overall throughput by **2–3x** and reducing median order processing latency by **40%**.

TECHNICAL SKILLS

Languages & Backend: Java, Spring Boot, REST APIs, Microservices

Messaging & Caching: Apache Kafka, Redis

Databases: MySQL, PostgreSQL, MongoDB

DevOps, Cloud & Tools: Docker, Kubernetes (Basic), Jenkins (CI/CD), AWS (S3, EC2, RDS), Git, Maven, JUnit, Mockito, Integration Testing, Swagger/OpenAPI, SonarQube, Kibana

ACHIEVEMENTS

Winner, Code Ninjas Category | Birla Pivot Feature Blitz Event (Hackathon 2024) | Certificate

- Developed and delivered **3 bug-free features** within **24 hours**, collaborating with backend teams to rapidly integrate APIs and enable fast feature delivery.
- Secured **Global Rank 1011 (AIR 191)** in **Google HashCode**.
- Solved **900+** problems on **LeetCode** with a contest rating of **1729 (Top 10% globally)**.
